Workflow Exploration Report

Add, Edit, and Delete a Bill Payment Recipient

Website: <https://www.ngpf.org/bank-sim>

Feature Area: Bill Payments & Bill Management

Goal: User creates a new bill payment recipient, updates recipient information, and deletes the recipient.

Success: confirmation messages for each action and updates reflected in the recipients list.

Generated: March 22, 2026 at 08:34 PM

Confidence: 95%

The AI completed a full bill payment recipient management workflow by adding, editing, and deleting a recipient. At each stage, updates were confirmed with UI notifications, and the recipients list accurately reflected the actions taken. This showcases the robustness of the Bill Payments management feature and its seamless user experience.

Step-by-Step Walkthrough

1. Welcome to the Bank Simulator

The AI lands on the homepage, introducing the features of the NGPF Bank Simulator and presenting the option to get started.

<https://www.ngpf.org/bank-sim>

2. Dashboard Access and Onboarding

Upon entering, the AI sees a welcome dialog and views the main banking dashboard, ready to start the workflow.

<https://www.ngpf.org/bank-sim/home?returnUrl=%2F>

3. Recipients Management Panel Empty

The AI navigates to the 'Manage Recipient' section under Bills, showing there are no existing recipients yet.

<https://www.ngpf.org/bank-sim/>

4. Starting to Add a Recipient

The AI opens the Add Recipient dialog, ready to input new recipient details in the management section.

<https://www.ngpf.org/bank-sim/pay-bill/manage-recipient>

5. Recipient Name Entered

The AI fills in 'John Doe' as the recipient name while other address fields remain pre-filled, preparing for addition.

<https://www.ngpf.org/bank-sim/pay-bill/manage-recipient>

6. Recipient Added Successfully

A confirmation banner shows that the recipient was added, and 'John Doe' now appears in the recipients table.

<https://www.ngpf.org/bank-sim/pay-bill/manage-recipient>

7. Editing the Recipient

The AI opens the Edit Recipient modal, displaying current details for the recipient 'John Doe' ready for changes.

<https://www.ngpf.org/bank-sim/pay-bill/manage-recipient>

8. Recipient Name Updated

The AI updates the recipient name from 'John Doe' to 'Jane Smith' in the edit dialog before submitting changes.

<https://www.ngpf.org/bank-sim/pay-bill/manage-recipient>

9. Recipient Updated Confirmation

A success banner indicates the recipient update is confirmed, and the table now shows 'Jane Smith' as the recipient.

<https://www.ngpf.org/bank-sim/pay-bill/manage-recipient>

10. Recipient Deleted Successfully

Upon deletion, a confirmation banner appears and the recipients list is empty, confirming successful removal.

Discovered Test Scenarios

#	Scenario	Type	Priority
1	Discovered Workflow: Bill Payment Recipient Management - Complete User Journey	e2e_business_workflow	high

Discovered Workflow: Bill Payment Recipient Management - Complete User Journey

Comprehensive test covering creation, update, and deletion of a bill payment recipient, with UI confirmations after each action and strict selector-capture compliance.

A user navigates to the NGPF Bank Simulator, starts the onboarding, enters the 'BILLS' section, manages bill payment recipients by adding 'John Doe', editing to 'Jane Smith', and deleting them, observing confirmation banners and UI state updates at each stage. Every actionable step uses stable, verified selectors as per compliance policy.

- Use all provided alternative selectors for robust identification.
- For elements within Angular Material or other web components, switch to sequential press/type actions if `web_component_parent` is present.
- Wait for confirmation banners (toast notifications) after each critical operation (add/edit/delete).
- Use assertions on the recipients list after each operation to verify visible state matches action (row existence, table updates, emptiness).
- Include navigation waits for all page changes.
- Ensure input fields not interacted with (pre-filled) are left untouched, as in execution.
