Workflow Exploration Report

Validate Check Deposit Form and Error Handling

Website: <https://www.ngpf.org/bank-sim>

Feature Area: Check Deposit Simulation

Goal: Attempt to submit check deposit with missing or invalid fields. Success: Submit button remains disabled and inline error messages appear, preventing incomplete deposits.

Generated: March 22, 2026 at 08:32 PM

Confidence: 95%

The AI tested the check deposit form by attempting to submit it with all required fields left empty. It confirmed the form's 'Submit' button stays disabled, effectively preventing incomplete submissions, but observed that no inline error messages were shown. This result validates the form's basic error handling but highlights the absence of additional user feedback.

Step-by-Step Walkthrough

1. Bank Simulator Landing Page

The AI navigates to the NGPF Bank Simulator homepage, ready to start the workflow test.

<https://www.ngpf.org/bank-sim>

2. Welcome Modal Displayed

The AI clicks 'GET STARTED NOW' and encounters the welcome modal, confirming entry into the simulator.

<https://www.ngpf.org/bank-sim/home?returnUrl=%2F>

3. Access Deposit Check Form

The AI enters the check deposit workflow, displaying the form with required fields still empty.

<https://www.ngpf.org/bank-sim/>

4. Submit Button Disabled

The AI attempts to submit without any filled fields and verifies the disabled 'Submit' button, with no inline error messages present.

Discovered Test Scenarios

#	Scenario	Type	Priority
1	Discovered Workflow: Validate Check Deposit Form and Error Handling -- Partial	partial_flow	high

Discovered Workflow: Validate Check Deposit Form and Error Handling -- Partial

This test attempts to submit an incomplete check deposit form (all required fields left empty) and verifies that the 'Submit' button remains disabled, preventing submission. It also checks for inline error messages beneath or near form fields. The workflow confirmed that the button is disabled, but did not observe any inline error messages, meeting only part of the validation goal.

A user launches the NGPF Bank Simulator, initiates the check deposit workflow, and purposefully leaves all required fields on the deposit form empty. The test confirms that the 'Submit' button is disabled (preventing incomplete submission). No inline error messages are seen, so only partial validation is achieved.

- Capture selectors for all actionable elements before interacting.
- Use `waitForSelector` after navigation and for dynamic content such as modals.
- Check `button.disabled` property before attempting to click 'Submit'.
- Use `assert` to verify that no error messages (e.g., elements containing 'Please', 'required', 'error', or similar) are present after attempted submission.
- For components within Angular or Material web components, use `pressSequentially` or Playwright's appropriate Shadow DOM strategies if `web_component_parent` is present.
