Workflow Exploration Report

Internal Fund Transfer

Website: <https://www.ngpf.org/bank-sim/home>

Feature Area: Fund Transfers

Goal: Initiate a transfer between accounts and verify it in history.

Generated: April 27, 2026 at 09:31 AM

Confidence: 100%

The AI successfully navigated the bank simulation to perform an internal fund transfer of \$50 from a checking account to a savings account. It completed the multi-step form, including account selection and amount entry, and verified the transaction's success in the transfer history log.

Step-by-Step Walkthrough

1. Accessing the Bank Simulator

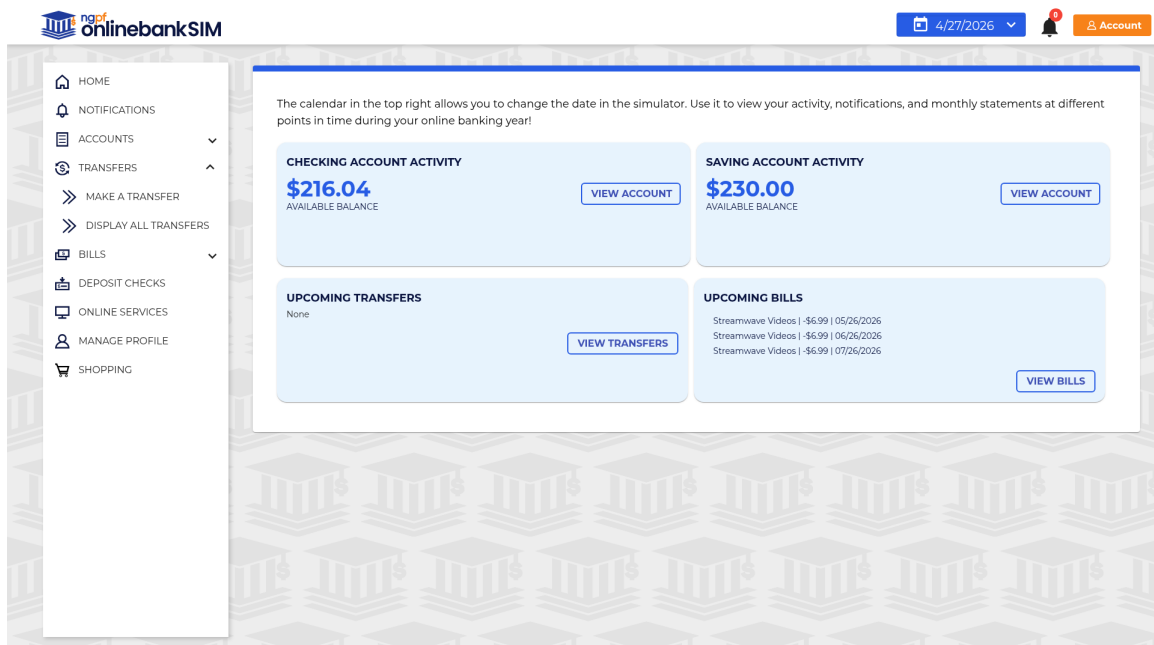

The AI navigates to the landing page and clicks the 'Get Started Now' button to enter the simulation.

about:blank

2. Navigating to the Transfer Section

After dismissing the welcome modal, the AI expands the 'Transfers' menu on the dashboard.

https://www.ngpf.org/bank-sim/

3. Opening the Transfer Form

The AI selects 'Make a Transfer' to load the fund transfer interface.

5. Verifying the Completed Transfer

The AI submits the transfer and verifies that the \$50 transaction appears correctly in the transfer history.

Discovered Test Scenarios

#	Scenario	Type	Priority
1	Discovered Workflow: e2e_business_workflow - Complete User Journey	e2e_business_workflow	high

Discovered Workflow: e2e_business_workflow - Complete User Journey

Comprehensive test covering the initiation of a fund transfer from Checking to Savings, including navigation through the simulation start and menu systems.

The user starts the bank simulation, dismisses the welcome modal, and navigates to the Transfers section. They then initiate a new transfer by selecting a single payment frequency, choosing the Checking account as the source and Savings as the destination. After entering an amount of 50 and a specific payment date, they save the transfer and are redirected to the transfer history page.

- The application uses Angular Material components; ensure to use click actions on comboboxes before selecting options from the overlay.
- Several elements are wrapped in Material containers (mat-card-content, mat-form-field); use the provided web_component_parent metadata for precise targeting.
- The 'Payment Date' field may require specific formatting or interaction with a date picker if simple fill fails, though 'fill' was successful in the trace.
